

# SPECTRUM

## SECURITY ANALYTICS PLATFORM

### Transforming Security Telemetry into Actionable Intelligence

Spectrum is a next-generation security analytics and reporting platform that integrates with leading Network Detection & Response and Security Analytics solutions via API to deliver unified visibility, advanced analytics, operational intelligence, and compliance-ready reports.

UNIFIED VISIBILITY

SMART ANALYTICS

ACTIONABLE REPORTS

AUDIT & COMPLIANCE

### KEY FEATURES

#### Centralized Security Analytics

Aggregate and correlate events, flows, alarms, and behavioral data from multiple sources into a single pane of glass.

#### Advanced Visualization

Interactive dashboards and network maps reveal attack patterns, communication behavior, and risk exposure in real time.

#### Executive & Operational Reporting

Pre-built and customizable reports for executives, SOC teams, and auditors with scheduled delivery and export in multiple formats.

#### Threat Investigation & Forensics

Powerful search and drill-down capabilities to investigate incidents, trace attack paths, and collect evidence.

#### Compliance & Audit Ready

Generate audit-ready reports aligned with industry standards and organizational policies.

#### Workflow & Integration

Seamless integration with ITSM, SIEM, SOAR and notification systems to streamline response and remediation.

#### Role-Based Access Control

Granular access control to ensure the right information is available to the right people.

#### Audit & Activity Logging

Comprehensive logs for user activities, report generation, API access, and system changes.

### INTEGRATIONS

...and more via REST API / Syslog / Webhook

### DEPLOYMENT OPTIONS

On-Premises

Virtual Appliance

Private Cloud

- ✓ Scalable Architecture
- ✓ High Availability
- ✓ Secure by Design
